Re-thinking Emergencies

MASA supports members following medical transportation emergencies. Can we re-think emergencies to broaden product and / or service opportunities?

Emergencies don't have to be...

- Medical-related or Life-threatening

Emergencies can be...

- Permanently life-changing (ex: non-medical financial catastrophe) or
- Temporarily life-altering (ex: loss of home or vehicle)

An emergency can be any situation where normal decision making, logistics, or access to help breaks down.

Allows us to consider an emergency ‘model’

Medical ↔ Non-Medical
Severe ↔ Annoyance but Disruptive
Sudden ↔ Foreseeable (can plan)

3-Axis Impact Model

Severity (Impact)

How bad *if nothing is done*?

Level	Description
S0: Inconvenience	Disruptive but safe (missed connection, flat tire)
S1: Minor	Injury or loss requiring action (sprain, lost meds)
S2: Serious	Risk of deterioration (fracture, severe dehydration)
S3: Critical	Life-threatening, time-sensitive (stroke, sepsis)

Urgency (Time Sensitivity)

How fast must action occur?

Level	Time Window
U0	Can wait days
U1	Hours
U2	Minutes
U3	Immediate / now

Context Complexity

Why is this harder *right now*?

Context	
Away from home	Limited connectivity
Language barrier / No local knowledge	Traveling with dependents
Infrastructure disruption	Legal / insurance complexity

Emergencies Framework with potential app roles

Medical Emergencies	Travel & Mobility Emergencies	Environmental & Disaster Emergencies	Property & Asset Emergencies	Safety & Security Emergencies
Acute health events requiring care	Movement disrupted or stranded	Large-scale or location-based threats	Loss or damage of essential assets	Threats to personal safety
Sub-categories: Life-threatening (cardiac, stroke, trauma) Serious but stable (fractures, infections) Chronic condition flare-ups Post-surgical physical therapy Medication issues (lost, stolen, expired) Elder care incident Last-minute caregiving needs	Sub-categories: Injured while traveling Child sick while traveling Stranded in remote area Lost passport / documents Pet emergency while away Vehicle breakdown Missed or canceled transport	Sub-categories: Natural disasters (hurricane, wildfire, flood) Weather emergencies Infrastructure failure (power, water) Air quality / contamination Significant home damage	Sub-categories: Home emergency while away Essential tech failure Theft Fire / flood damage Major auto accident (without injury) Lost phone	Sub-categories: Hotel or accommodation safety issues Crime / assault Missing person Stalking Civil unrest
Potential app roles: Triage guidance (not diagnosis) Decision trees ("ER vs urgent care vs self-care") Local provider discovery Medical record access Care coordination	Potential app roles: Step-by-step playbooks Trusted service discovery Offline guidance Embassy / consular info Rebooking logic	Potential app roles: Evacuation planning Risk alerts Shelter discovery Family coordination Supply checklists	Potential app roles: Property inventories Insurance workflows Service coordination Evidence capture	Potential app roles: One-tap emergency actions Silent alerts Safe route navigation Trusted contact escalation Documentation capture
