

Multi-product

2026

Product Expansion – Framework Option 1

This is my initial concept for a product expansion framework.

Dedicated Seminar Distribution

- Intent to start as a pilot in seminars
- Could optimize CAC with other distribution channels
- Should be more difficult product to explain, higher revenue potential
- Likely not a financial product (“Plan” within “Plan” – “Respond” – “Recover” framework)
- Ex: Estate Planning, Final Expense, 401k, Long-Term Care

Bundled with Existing Products

- Intent is to increase price, increase conversion, or both
- Could be either a financial product or digital service
- Could be an upsell to existing base (ex: outbound call members offering trip coverage)
- Should be easier to explain, more common, likely lower revenue
- Logically easier to tie to other distributed products (ex: travel medical w/ MASA emergency transport protection)
- Ex: Annual travel medical, roadside service

Dedicated Products or Services

- Likely not a financial product (likely “Respond” or “Recover”)
- Likely a 3P service, inhouse service / product, or AI product
- Ex: Medical billing / claims denial advocacy service, companion care coordination, NEMT

Product Expansion – Framework Option 2

This is ChatGPT's approach to a product expansion framework based on my initial concept on the prior slide.

Component	Strategic role	Best product types	Primary channel	What success means
Seminar Anchor Products	Justify CAC, drive revenue	LTC/recovery protection, final expense, annuity pilot	Seminar, then specialist follow-up	conversion, commission, show-to-close
Attach / Bundle Products	Raise AOV / solve objections	Travel medical, accident cash, roadside/travel support	Seminar, outbound, renewal	attach rate, AOV, retention
Service & Engagement Layer	Build trust / engagement / future monetization	Bill advocacy, care coordination, NEMT, family support	App, phone, partner-led service	usage, renewal lift, CSAT, referrals
Channel Migration Path	Scale proven products efficiently	simpler protections and services	Phone, member upsell, digital	CAC improvement, close rate, payback

Fit -> Pilot -> Channel decision -> Scale / stop

Product Expansion – Framework Option 3

This is Claude's approach to a product expansion framework based on my initial concept and ChatGPT's ideas on the prior slides.

Product Expression	Strategic Role	Best Anchor or Attach	Distribution
Next Step (crisis navigation)	Core; extends your existing moment of truth	Hospital Indemnity / Accident Cash + Discharge Coordination	Seminar attach → Phone
Anchor (caregiver support)	Growth; expands into longer care arc	LTC Hybrid / Recovery Protection + Home Care coordination	Seminar pilot → At-home specialist
Buffer (emergency financial)	Core; addresses most-cited seminar objection	Hospital/Accident cash, Short-term income protection	Seminar attach → Outbound
Horizon (long-term financial)	Stretch; highest commission, lowest brand adjacency	Annuity (3P white-label test) / Final Expense	Seminar pilot → Specialist
Close By (remote family safety)	New demographic; different channel entirely	Family coordination, NEMT, monitoring	App/Digital; outbound to adult children

Fit -> Pilot -> Channel decision -> Scale / stop

Native Categories Identified

Based on Customer Research, this is how risks feel
(along with examples of these categories of risk)

Shock Events	Inevitable Decline	The Care Load (hidden)	Financial Erosion	Persistent Worry
Parent hospitalized Fall or injury Car accident Big unexpected bill	Cognitive decline Mobility decline Needing assisted living Long-term caregiving at home	Coordinating caregivers Finding facilities Insurance confusion Managing siblings Being the “point person” Taking time off work	Outliving retirement savings Big future care costs Insufficient college savings	Child driving cross-country College student away Parent living alone Risk of falls Being unreachable
<i>How it feels:</i> Sudden, hot cascading, “out of nowhere”	<i>How it feels:</i> Predictable but uncertain in timing. Heavy and emotional.	<i>How it feels:</i> Exhausting, unseen, and ongoing.	<i>How it feels:</i> Uncertain and unfair.	<i>How it feels:</i> Nagging but not catastrophic.

- However, the risks identified...
- Mostly align with ‘financial risk’.
 - Aren’t all the emergencies or risks that lead to ‘financial risk.’
