

Product Strategy Overview

2026

Project Context

What we set out to understand

Foundational insights that underpin a consumer-driven growth strategy

- How consumers understand risk (“native categories)
- Where MASA can create value with new products and services
- Where MASA can credibly acquire customers, win trust, and how they can expand their role in consumers’ lives

Core Insight: Risk vs. Agency

HIGH AGENCY

The belief that:

- I can meaningfully do something
- There are tools available
- I understand my options
- I can afford to act

OPEN ENDED UNCERTAINTY

- Timing is unknown
- Severity is unknown
- Duration is unknown
- Financial impact is unclear
- There is no obvious playbook

DEFINED RISK

- The event is concrete or is already happening
- The outcome is somewhat predictable
- The timeline feels bounded
- The costs or implications are more knowable

The belief that:

- It's too late
- I can't afford another bill
- I don't know what to do
- Insurance won't pay out anyway

LOW AGENCY

Core Insight: Risk vs. Agency

Responding to Risk

Awareness or concern does not equal action

All participants were highly aware of risks to their health, financial, and physical security.

But awareness and concern compete with:

- Budget constraints
- Immediate problems to solve
- Skepticism towards solutions
- Perception that mitigation is limited or their agency is low

Core Insight: Risk vs. Agency

MASA's Strategic Opportunity

*MASA's role is not just providing risk coverage.
It's increasing agency.*

What reduces agency

- Cost uncertainty ("another \$400/month?")
- Decision overwhelm ("what am I forgetting?")
- Insurance skepticism ("LTC is a total gamble")
- Identity conflict ("I don't take prescriptions")
- No obvious playbook

What increases agency

- Clear interpretation
- Clear next steps
- Confidence solutions will work
- Affordable options
- Coordination support

Core Insight: Risk vs. Agency

MASA's Strategic Opportunity

How can MASA create customer interactions that reduce friction and help people act on risks?

What reduces agency

- Cost uncertainty ("another \$400/month?")
- Decision overwhelm ("what am I forgetting?")
- Insurance skepticism ("LTC is a total gamble")
- Identity conflict ("I don't take prescriptions")
- No obvious playbook

What increases agency

- Clear interpretation
- Clear next steps
- Confidence solutions will work
- Affordable options
- Coordination support

Native Categories Identified

Based on Customer Research, this is how risks feel
(along with examples of these categories of risk)

Shock Events	Inevitable Decline	The Care Load (hidden)	Financial Erosion	Persistent Worry
Parent hospitalized Fall or injury Car accident Big unexpected bill	Cognitive decline Mobility decline Needing assisted living Long-term caregiving at home	Coordinating caregivers Finding facilities Insurance confusion Managing siblings Being the “point person” Taking time off work	Outliving retirement savings Big future care costs Insufficient college savings	Child driving cross-country College student away Parent living alone Risk of falls Being unreachable
How it feels: Sudden, hot cascading, “out of nowhere”	How it feels: Predictable but uncertain in timing. Heavy and emotional.	How it feels: Exhausting, unseen, and ongoing.	How it feels: Uncertain and unfair.	How it feels: Nagging but not catastrophic.

Native Categories: How People Act

How consumers respond to these risks depends both on how urgent the risk feels and whether the **solutions feel cognitively, emotionally, and financially feasible**.

Consumers act when urgency is high and the effort to respond feels within reach.

Native Categories: How People Act

Severity and immediacy increase urgency. Consumers tolerate higher friction solutions with severe risks and when they have no other choice.

For instance, tolerating major disruption to stay with a loved one in the hospital and overhauling life at home to care for them.

Native Categories: Where MASA can play

The easiest place to **enter is where risk is immediate and severe**, consumers are motivated to act, but solutions are high friction and agency is low.

MASA can acquire consumers during shock events or when they are experiencing the Care Load and offer solutions that **lower friction and solve urgent priorities**.

Native Categories: Where MASA can play

MASA could also enter where consumers are already oriented to act or using point solutions.

MASA can compete as a better solution that **supports their existing behavior** to monitor risks and offer response services.

Native Categories: Where MASA can play

A third, untapped opportunity is to **enter areas where risk is distant and abstract.**

MASA could build pathways from acute events into longer-term financial support and offer solutions that meet more needs in this category.

MASA's Value

Insurance in the lived experience

Traditional insurance products pay out after the emergency and after the consumer has experienced the most complexity and needs.

MASA's Value

MASA in the lived experience

MASA can create value before, during, and after emergencies by restoring consumers' agency to respond and meeting multiple types of needs.

Market Gap: Where Insurance Fits

Clarity and Prioritization

Interpretation and decision support

Coordination

Finding and orchestrating resources

Emotional Support

Caregiver self-care

Financial Activation

Liquidity and planning tools

Insurance pays claims but it does not help people navigate the event.

Compensation

Money paid after a qualifying event to compensate for loss.

Examples

- Accident indemnity payout
- Disability insurance replacing income
- Long-term care insurance paying benefits
- Life insurance payout

Activation

Helping consumers access, understand, or mobilize resources while navigating the event.

Examples

- Interpreting Medicare coverage
- Helping pay for short-term care before insurance kicks in
- Accessing emergency liquidity
- Structuring payment plans for hospital bills
- Coordinating benefits across multiple sources
- Forecasting care costs
- Unlocking credit or savings reserves

The MASA System

Product Portfolio Aligned to Emotional States

NATIVE CATEGORIES	SHOCK EVENTS	THE CARE LOAD	FINANCIAL EROSION	INEVITABLE DECLINE	PERSISTENT WORRY
EMOTIONAL STATE	Urgent and overwhelming	Exhausting and relentless	Fragile and exposed	Predictable but uncertain	Low-level vigilance
MASA SYSTEM					
PRODUCT EXPRESSION	Next Step Crisis navigation and decision support during emergencies	Anchor Coordination and emotional support for caregivers	Buffer Emergency financial resilience	Horizon Long-term financial stability	Close By Family Monitoring and safety support

The MASA System: Product Architecture

One intelligence layer connecting guidance, coordination, and financial support.

Likely Path 1: Parent Hospitalized

Shock Events

“The Scramble”

Parent is hospitalized after ER visit and gets an unexpected diagnosis.

1

Entry Point: Navigate immediate decisions, build trust

Caregiver finds ‘Next Step’ by searching “what to ask doctor in ER?”

Next Step (Free product)

- Diagnosis explained
- Hospital question checklist
- Discharge planning prompts
- Medicare basics clarified

What we learn from SAM:

- Age of parent
- Insurance type
- Level of independence
- Financial stress signals
- Sibling involvement

The Care Load

“The Grind”

Caregiver is emotionally and cognitively overwhelmed.

2

Deepen: Stabilize caregiving

Once engaged, the caregiver upgrades to:

Next Step Companion (Paid product)

- Transition roadmap (30-90 days)
- Facility comparison
- Cost forecasting
- Crisis coordination tools

If complexity escalates, they upgrade to:

Next Step Navigator (Premium product)

- Live crisis support
- Facility placement help
- Billing interpretation
- Transport coordination

Financial Erosion

“The Squeeze”

The caregiver worries about sustaining care, unexpected bills, and funding their own long-term goals.

3

Horizontal Expansion: Plan for the next shock

From crisis stabilization, SAM identifies adjacent needs:

- Unexpected expenses
- Ongoing care coordination
- Parent living alone
- Retirement vulnerability

SAM detects emerging risks and prompts:

- Stabilize finances -> **Buffer**
- Make care sustainable -> **Anchor**
- Increase visibility -> **Close By**

Likely Path 2: Ongoing Caregiver

Shock Events

“The Grind”

Parent is aging at home. Caregiver is juggling appointments, decisions, siblings, and work.

1

Entry Point: Navigate immediate decisions, build trust

Caregiver finds ‘Anchor’ by searching “Caregiver burnout” or “Aging at home”

Anchor (Free product)

- Care load audit
- Next steps planner
- Hard conversations coach
- Emotional support check-in

What we learn from SAM:

- Level of care intensity
- Frequency of coordination tasks
- Sibling dynamics
- Signs of exhaustion
- Financial strain indicators

2

Deepen: Make the role sustainable

Once engaged, the caregiver upgrades to:

Anchor Companion (Paid product)

- Care calendar and coordination hub
- Shared family task dashboard
- Financial care manager
- Governance toolkit (who decides what, escalates, POAs)

If complexity escalates, they upgrade to:

Anchor Navigator (Premium product)

- Dedicated care navigator
- Escalation support
- Local resource coordination
- In-home aide sourcing

The Care Load

Financial Erosion

“The Squeeze”

The caregiver worries about sustaining care, unexpected bills, and funding their own long-term goals.

3

Horizontal Expansion: Prevent erosion before it happens

From ongoing coordination, SAM identifies adjacent risks:

- Caregiver burnout
- Unexpected medical expenses
- Retirement delay
- Parent fall risk

SAM detects emerging risks and prompts:

- Stabilize finances -> **Buffer**
- Increase visibility -> **Close By**
- Protect long-term goals -> **Horizon**

Likely Path 3: Distant Child

Persistent Worry

Financial Erosion

“The Send Off”

The parent prepares for the child to leave for college. They worry about being able to help from far away.

“The Call”

The parent wants to put extra protection in place before the child takes a trip or after a minor emergency.

“The Squeeze”

The parent is financially squeezed with paying for college and worried about saving for retirement.

1

Entry Point: Satisfy parent’s need to understand risks

Parent finds Close By when googling “college move-in checklist”

Close by (Free product)

- Teen driver safety checklist
- Travel readiness check
- “Should I worry?” risk Q&A
- Conversation guide for setting safety expectations

What we learn from SAM:

- Distance from home
- Travel habits
- Car age / safety features
- Campus location
- Parent anxiety signals

2

Deepen: Support independence without hovering

Once engaged, the parent upgrades to:

Close By Companion (Paid product)

- Care calendar and coordination hub
- Shared family task dashboard
- Financial care manager
- Governance toolkit (who decides what, escalation, POAs)

If an incident occurs or the child will be traveling farther, they upgrade to:

Close By Navigator (Premium product)

- Dedicated care navigator
- Escalation support
- Local resource coordination
- In-home aide sourcing

3

Horizontal Expansion: Prevent erosion before it happens

From monitoring, SAM identifies adjacent needs:

- Unexpected travel expenses
- Emergency fund gaps
- Parent’s own financial vulnerability
- Long-term college cost strain

SAM detects emerging risks and prompts:

- Add liquidity for emergencies -> **Buffer**
- Be ready for a medical event -> **Next Step**
- Strengthen long-term stability -> **Horizon**

Likely Path 4: Aging Parent

Persistent Worry

Shock Events

“The Red Flag”

Parent mentions they “took a little spill” but says they’re fine.

1

Entry Point: Satisfy parent’s need to understand risks

Caregiver searches: “How to prevent older adult falling?”

Close By (Free product)

- Fall risk Q&A
- Home safety self-audit
- “Should I be concerned?” check
- Conversation starter prompts

What we learn from SAM:

- Living situation
- Mobility changes
- Prior incidents
- Distance from adult child
- Care involvement today

2

Deepen: Increase visibility without overreacting

Once engaged, the parent upgrades to:

Close By Companion (Paid product)

- Wearable and smart home device integration
- Family visibility dashboard
- Fall risk alert thresholds
- Travel check-ins
- Emergency contact escalation logic

If falls continue to happen or health declines, caregiver upgrades:

Anchor Companion (Paid product)

- Care calendar
- Sibling coordination
- “Hard conversation” planning support
- Early-stage care roadmap

3

Horizontal Expansion: Plan before next emergency

From early risk signals, SAM identifies:

- Increased fall likelihood
- Home safety vulnerabilities
- Mobility decline trajectory
- Emergency response gaps

SAM detects emerging risks and prompts:

- Create a crisis plan -> **Next Step**
- Build a care transition plan if you need it -> **Next Step Companion**

The MASA System: From Product to Platform

MASA becomes the intelligence and orchestration layer connecting customers to a network of services.

Project Scope: Next Steps

PHASE 1

**Qualitative research, insight
& concept generation, and
alignment**

Purpose:

Generate the core consumer, category, and value-prop insights needed to identify MASA's strongest entry point and inform sequencing.

PHASE 2

**Quantitative research,
product prioritization, and
insight validation**

Purpose:

Prioritize the demand and launch sequence of the product concepts, and size appeal across the consumer segments.

PHASE 3

**Product and portfolio decision
shaping**

Purpose:

Translate research findings into clear, decision-ready product recommendations, portfolio architecture, and sequencing. Facilitate decision making and actionable next steps in a series of leadership workshops.

Concept Detail: Next Step

Integrates multidimensional support during an emergency

“Next Step” helps families interpret what is happening and coordinate the immediate response. It explains diagnoses, surfaces the most important questions to ask, and guides families through decisions like discharge planning, rehab placement, and insurance coverage.

Clarity and Prioritization	Coordination	Financial Activation
Help consumers understand the situation and determine the right next steps. • Interpret symptom severity and diagnoses. • Explain treatment options. • Reduce complex decisions to 2-3 prioritized next actions. • Questions to ask providers. • Compare facilities or care pathways neutrally.	Help consumers move from diagnosis to action. Features: • Facility search • Transportation and logistics • Transition planning from hospital to rehab or home care. • Help finding equipment, health aides, and services. • Transition checklists.	Help consumers understand and prepare for financial implications. Features: • Insurance interpretation • Coverage explanation and cost forecasting.

Existing Point Solutions

These tools provide information or services but none interpret options and coordinate next steps across the full care journey.

Clarity and Prioritization

- WebMD / Mayo clinic tools
- ChatGPT symptom searches

Coordination

- Carebridge
- CareZone
- Lotsa Helping Hands

Financial Activation

- Medicare.gov
- Hospital billing portals

Concept Detail: Anchor

Integrates multiple caregiving services

When a loved one requires ongoing care, families become informal care managers – coordinating appointments, medications, finances, and responsibilities. “Anchor” centralizes this coordination and distributes tasks across the family network.

Clarity and Prioritization	Coordination	Financial Activation	Emotional Support
Help caregivers anticipate future care needs and transitions.	Provide a shared system to organize caregiving activities.	Help families manage the financial complexity of caregiving.	Support caregivers dealing with ongoing responsibility and stress.
Features • Early warning signals for health changes. • Forecasting of upcoming care transitions.	Features: • Shared care calendars and task assignments. • Appointment, medication, and treatment tracking.	Features: • Medicare billing support. • Cost calculators for care scenarios. • Drug discount and care service partnerships.	Features: • Reassurance and validation. • Coaching on difficult family conversations.

Existing Point Solutions

Families assemble multiple tools to manage caregiving but none provide a unified operating system for care.

Clarity and Prioritization

- CareZone (medication management)

Coordination

- Lotsa Helping Hands (task coordination)
- Caring Village (care dashboard)

Emotional Support

- Papa (companionship services)

Concept Detail: Close By

Integrates location and safety monitoring, escalation, and response

Families rely on fragmented monitoring tools but lack a structured escalation system when something goes wrong. “Close By” integrates monitoring signals and activates response when anomalies occur.

Clarity and Prioritization

Help families interpret signals and understand when intervention is needed.

Features

- Passive monitoring signals (location, activity, medication).
- Safety alerts and threshold triggers.

Coordination

Activate help when an anomaly or emergency occurs.

Features:

- Escalation protocols to family members.
- Live response coordination (wellness check, roadside help, etc.).
- Coordination with ER or care facilities if needed.
- Local logistical support for travel or emergency situations.

Existing Point Solutions

These tools generate alerts but they do not interpret signals or coordinate response.

Safety Monitoring

- Life360
- AngelSense
- Apple Watch fall detection

Home Monitoring

- Nest
- Ring

Financial Monitoring

- EverSafe
- True Link

Concept Detail: Buffer

Hybrid savings + credit product

Unexpected expenses can cascade into long-term financial instability. Buffer helps households build a financial reserve and provides liquidity when emergencies occur.

Clarity and Prioritization

Help consumers understand their financial resilience.

Features

- Goal-based savings categories (e.g., hospitalization, travel).
- Visualize progress toward goal.
- Financial planning Q&A.

Financial Activation

Provide immediate liquidity during unexpected events.

Features:

- Pre-approved credit line activated during qualifying events.
- Deferred repayment options during crises.
- Transparent dashboard showing available coverage.

Existing Point Solutions

These tools provide liquidity and help manage a big expense but they do not help consumers prepare for unexpected events.

Short-Term Credit / Budget Smoothing

- CareCredit (health credit card)
- BNPL
- Affirm
- Chase Pay in Four

Emergency Liquidity

- Credit cards
- Overdraft protection

Concept Detail: Horizon

Hybrid investment + credit product

Consumers struggle to save for long-term care and worry that healthcare costs will erase retirement savings. Horizon combines savings with conditional coverage to protect financial stability later in life.

Clarity and Prioritization

Help consumers understand long-term financial exposure.

Features

- Goal-based savings tied to future care scenarios.
- Simple “runway” visualization of financial preparedness.
- Automated contributions that minimize budgeting complexity.

Financial Activation

Protect savings while providing conditional coverage for major events.

Features:

- Dedicated health reserve savings account.
- Supplemental payout or coverage if qualifying care events occur.
- Waived fees or access to care navigation services.
- Integration with retirement and long-term care planning.

Existing Point Solutions

These tools support long-term savings but they do not protect savings from health or caregiving shocks.

Investment

- Betterment
- Acorns

Retirement

- 401k plans

Insurance

- Term life insurance

Native Categories: How Risks Feel

	SHOCK EVENTS	INEVITABLE DECLINE	THE CARE LOAD (hidden)	FINANCIAL EROSION	PERSISTENT WORRY
What Hangs Together	• Parent hospitalized • Fall or injury • Car accident • Big unexpected bill	• Cognitive decline • Mobility decline • Needing assisted living • Long-term caregiving at home	• Coordinating appointments • Finding facilities • Insurance confusion • Managing siblings • Being the “point person” • Taking time off work	• Outliving retirement savings • Gaps in Medicare • Big future care costs • Insufficient college savings	• Child driving cross-country • College student away • Parent living alone • Risks of falls • Being unreachable
How It Feels	Sudden, cascading, “out of nowhere”	Predictable but uncertain in timing. Heavy. Emotional.	Exhausting, unseen, and ongoing. This is caregiver risk distinct from the medical risk itself.	Uncertain and unfair. More erosion than explosion. It is less about a single event, more about slow erosion.	Nagging but not catastrophic. Low level vigilance.
People Say	“I hold my breath every month.” “You can’t see it coming.”	“If you live long enough, you’ll need help.” “You know it’s coming.” “How long can he stay at home?”	“What am I forgetting?” “My brain is cycling at night.” “Oxygen mask”	“There’s nowhere left to cut.” “We’ll have to figure it out.”	“Peace of mind.” “Check in.” “If something happens.” “Don’t want to be intrusive.”

Native Categories: Shock Events

What it feels like: “Wham! Out of nowhere.”

Parent Falls

At the ER

Transition to rehab

Transition home or to facility

What they do:

- Ask AI about symptoms
- Call a friend for advice
- Drop everything and jump into action

Customer Research quote: “Basically it came out of nowhere. I mean, I’m literally sitting there with my cats and there’s a phone call and you see, he’s in the hospital. You need to get out here. So, by the next day I’m on a plane.”

What they do:

- Googles questions to ask
- Resolves conflicting information

Customer Research quote: “How serious is this? What should my next steps be?” And I think, honestly, an AI tool just would have been like, get him to the doctor. Someone who could have seen my blind spots and been like okay, this is the action to take.”

What they do:

- Advocates for the right facility
- Worries about what they are missing
- Takes time off work

Customer Research quote: “Just a resource that basically knows all the moving parts that would kind of foreshadow things a little bit. So, I know what to expect, but also what needs to be done.”

What they do:

- Modifies home for safety
- Evaluate assisted living facilities
- Figure out what’s covered

Customer Research quote: “So this was a month-long journey. Big decisions. He was in a skilled nursing facility for weeks. At some point, we actually had to just private pay for that. I knew if I got him back to the house, we were going to have to pay a huge fortune because I’d already explored in-home care.”

Native Categories: Care Load

What it feels like: "It's exhausting."

Loved one returns home

Research

Create systems

Cope

What they do:

- Ask AI
- Search Reddit
- Ask Medical Providers

Customer Research quote: "I used ChatGPT – 'my grandma is going through cancer. These are the steps that I've taken. What am I missing that I'm not thinking about?' And then it would give me an answer. I would wonder what are community resources that could help me do additional research to ensure that I'm not missing anything."

What they do:

- Track tasks between caregivers and family
- Juggle caregiver schedules
- Take time off work

Customer Research quote: "It just takes up all of my mental energy. If you're counting physically researching things, traveling, communicating with her, it's going to be a full-time job. I'd say like maybe 20 or so hours a week."

What they do:

- Seek emotional reassurance, validation, and grief support from AI tools

Customer Research quote: "I wrote a whole PDF doc that was like two pages of what I experienced what I was going through with my grandma...just giving a bunch of context and then I uploaded it into my emotional buddy AI / GPT."

Native Categories: Financial Erosion

What it feels like: "It's out of my control."

Worry

Keep Working

Retire

Monitor

What they do:

- Plan for next job
- Worry about AI
- Wonder about assisted living

Customer Research quote: "The American dream is basically work, have family, have a house, get retired. But what if it's not like that? What if I get to 60, 70 years old and I am obligated to work because I can't retire and receive a pension? What if I'm not able to work anymore because I get injured? Being replaced by AI is also a concern."

What they do:

- Delay retirement
- Look for side income

Customer Research quote: "Am I going to run out of money? So, I try to stretch it out, accumulate. Because maybe I could try to predict exactly how much I would need up until 90 or something, and feel better about this risk of not finding a job. I'm not there yet."

What they do:

- Budget heavily
- Watch rising costs
- Watch investments

Customer Research quote: "I worked hard for retirement. They think that once you retire that you should be able to set and not worry about things, but budgeting that you thought would be a lot easier is not. Budgeting is so more meticulous that you have to really watch what you spend."

Native Categories: Financial Erosion

|--|--|--|---|

Native Categories: Persistent Worry

What it feels like: “It floats gently back and forth. It’s not an extreme.”

What they do:

- Spy on kids discreetly when apart

Customer Research quote: “This was summer and I was just sitting on my front porch. I wondered what they were doing. I wonder where they are. I see they’re on the highway going 102 miles per hour and I took a screenshot.”

What they do:

- Watch for red flags

Customer Research quote: “Most of my friends use it to track their kids but I think it’s also like ‘I’d love to put my parents on something that I could also monitor them. Not like what they’re doing but if I can’t get a hold of them, I can see where they are at and if they are moving to know if there is a problem.”

What they do:

- Create visibility through connected home devices

Customer Research quote: “Where we’re traveling, we are always thing – are they okay, are they safe. I have to take the kids somewhere they’ll always say ‘don’t worry about us.’ They probably feel that I’m thinking about them and not enjoying the trip.”

Native Categories: Persistent Worry

What consumers need

Needs

Early Independence

- Real-time visibility without intrusion
- Clear definition of "normal vs. concerning"
- Quiet reassurance

Temporary Separation

- Real-time visibility without intrusion
- Clear definition of "normal vs. concerning"
- Quiet reassurance

Red Flags

- Interpretation of signal
- Rapid response access
- Clear next steps

Ongoing Monitoring

- Defined risk triggers
- Relief from constant vigilance
- Emergency response
